MARY ANID

Full Stack Software Engineer | Cloud & AI Tooling
Troy, MI (Open to Remote) • (517) 977-7923 • mary.anid.mail@gmail.com • linkedin.com/in/mary-anid-7ba77a173

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 4+ years at General Motors owning customer-facing web applications and cloud-native, event-driven services end to end, from architecture through production observability. Works across Java, TypeScript, Python, React, and Spring Boot on Azure. Cut checkout API response times from over 10 seconds to under 2 seconds, and builds LLM-powered CI/CD automation for code review, story validation, and documentation.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, Python, SQL
Backend: Spring Boot, REST APIs, Microservices, Event-Driven Architecture
Frontend: React, TypeScript, Accessibility, Jest, React Testing Library
Cloud / DevOps: Azure (App Services, Functions, Event Hubs, Monitor), Docker, GitHub Actions, CI/CD
Data: PostgreSQL, Databricks
Observability: Datadog, Azure Application Insights, Distributed Tracing, Real User Monitoring (RUM)
AI / LLM Tooling: LLM-powered CI/CD workflows, AI agent configuration, MCP, prompt design, GitHub Copilot, Claude, Cursor

PROFESSIONAL EXPERIENCE

General Motors | Software Engineer June 2022 – Present

Full-Stack Development

- Own the Home Purchasing Platform's checkout and ordering services end to end (architecture, build, deploy, maintain), delivering secure APIs for authentication, checkout, product management, and ordering across web and mobile.
- Redesigned service boundaries and data access patterns, cutting API response times from over 10 seconds to under 2 seconds and improving checkout reliability.
- Reduced JavaScript bundle size by 30% through code splitting and dependency pruning, using Real User Monitoring data to improve page load by over 1 second across purchasing and Home Energy mobile experiences.

Cloud & Distributed Systems

- Built event-driven settlement services on Azure Event Hubs, asynchronously processing thousands of EV charging incentive and utility reward transactions each month.
- Architected the authentication platform's secure services, reducing authentication-related incidents by 40% for installer workflows.
- Build and operate containerized microservices on Azure App Services and Azure Functions, and designed reusable GitHub Actions CI/CD workflows adopted across 5+ services.

AI & Engineering Productivity

- Built an LLM-powered GitHub Actions workflow that checks each pull request against its linked story, posts review feedback, and generates PR summaries and documentation, catching scope gaps before human review across 6 repositories.
- Designed custom AI agent configurations and reusable skills (AGENTS.md rules, PR-review and story-writing prompts), standardizing how 10+ engineers use GitHub Copilot, Claude, and Cursor.
- Automated dependency vulnerability scanning in CI/CD, flagging outdated and at-risk packages before deployment.

Observability & Reliability

- Led observability across 4 services with distributed tracing, logging, and dashboards in Datadog and Azure Application Insights; defined logging and trace-propagation standards adopted by 3 other teams.
- Built automated alerting across Slack, PagerDuty, ServiceNow, and email, reducing mean time to resolution by 30%.

EDUCATION

University of Michigan — M.S. Computer Science & Information Systems Expected Dec 2026
Michigan State University — B.S. Statistics 2021
Certifications: Microsoft Azure Fundamentals (AZ-900)

LEADERSHIP & ORGANIZATIONS

GM WOC Social Lead • GM MENA Heritage Lead • MSU Arab Cultural Society Board • MSU Lebanese Student Association Board
